

PROJECT INITIALIZATION AND PLANNING PHASE

Team ID: SWTID-2026-8434

Project Name: Standard Laptop Procurement Automation using ServiceNow Flow Designer

Maximum Marks: 3 Marks

DEFINE PROBLEM STATEMENTS

Customer Problem Statement Template

A problem statement is created to understand the customer's point of view and identify the challenges faced during the existing process. It helps the team understand what the customer is trying to achieve, the difficulties they face, and the impact of those difficulties.

For the Standard Laptop Procurement Automation project, the problem statements focus on the difficulties involved in processing Standard Laptop requests, creating Catalog Tasks, and assigning them to the Hardware team.

Problem Statement – 1

I am:

An employee requesting a Standard Laptop.

I'm trying to:

Get my Standard Laptop request processed after it has been approved.

But:

The Catalog Task needs to be created and assigned to the Hardware team for further processing.

Because:

The laptop procurement process involves task creation and assignment after the request approval.

Which makes me feel:

That the request processing may be delayed and difficult to track.

Problem Statement – 2

I am:

A Hardware team member responsible for laptop configuration.

I'm trying to:

Receive approved Standard Laptop requests and begin the configuration process.

But:

The required Catalog Task needs to be created and assigned to the Hardware team.

Because:

The approved laptop request needs to move through the procurement workflow before configuration can begin.

Which makes me feel:

That the process can require additional manual effort and may not always be consistent.

PROBLEM STATEMENT TABLE

Problem Statement	I am	I'm trying to	But	Because	Which makes me feel
PS-1	An employee requesting a Standard Laptop	Get my Standard Laptop request processed after approval	The Catalog Task needs to be created and assigned to the Hardware team	The laptop procurement process involves task creation and assignment after approval	That the request processing may be delayed and difficult to track
PS-2	A Hardware team member responsible for laptop configuration	Receive approved Standard Laptop requests and begin configuration	The required Catalog Task needs to be created and assigned to the Ha	The approved laptop request needs to move through the procurement workflow before configuration can begin	That the process can require additional manual effort and may not always be consistent

IDENTIFIED PROBLEM

The Standard Laptop procurement process requires an efficient method to handle approved laptop requests and create the required Catalog Task for the Hardware team.

The process involves different ServiceNow components such as the **Service Catalog, Requested Items, Approvals, Flow Designer, and Catalog Tasks**. Without an automated workflow, the creation and assignment of the Catalog Task can require manual handling.

Therefore, there is a need for an automated solution that can create the Catalog Task after the Standard Laptop request is approved and assign the task to the **Hardware** group.

PROPOSED SOLUTION

The proposed solution is **Standard Laptop Procurement Automation using ServiceNow Flow Designer**.

The solution uses **Flow Designer** to automate the procurement workflow. When a Standard Laptop request is approved, the Flow automatically creates a **Catalog Task** and assigns it to the **Hardware** assignment group.

This automation reduces manual task creation and assignment, improves task visibility, reduces delays, minimizes manual errors, and helps ensure that approved laptop requests are processed consistently and efficiently.

FINAL PROBLEM STATEMENT

PS-1:

An employee requesting a Standard Laptop is trying to get the laptop request processed after approval, but the required Catalog Task needs to be created and assigned to the Hardware team. Because the procurement process requires task creation and assignment after approval, the request processing may be delayed and difficult to track.

PS-2:

A Hardware team member is trying to receive approved Standard Laptop requests and begin the configuration process, but the required Catalog Task needs to be created and assigned to the Hardware team. Because the approved request needs to move through the procurement workflow before configuration can begin, the process can require additional manual effort and may not always be consistent.

CONCLUSION

Based on the identified problem statements, the project proposes an automated Standard Laptop procurement workflow using **ServiceNow Flow Designer**. The automation ensures that once a Standard Laptop request is approved, a Catalog Task is automatically created and assigned to the Hardware team for configuration.

This provides a simple and consistent workflow from **Standard Laptop Request → Approval → Catalog Task Creation → Hardware Assignment → Laptop Configuration**.
