

DATA FLOW DIAGRAM

Team ID: SWTID-2026-8434

Project Name: Standard Laptop Procurement Automation using ServiceNow Flow Designer

Maximum Marks: 2 Marks

DATA FLOW DIAGRAM

The Data Flow Diagram represents how data moves through the **Standard Laptop Procurement Automation** system. It shows the interaction between the user, ServiceNow processes, Requested Items, Approval, Flow Designer, and Catalog Tasks.

The main purpose of the DFD is to represent the flow of a Standard Laptop request from submission through approval and finally to the Hardware team for laptop configuration.

DFD SYMBOLS USED

Symbol	Name	Description
Oval / Rounded Shape	External Entity	Represents the user who submits the Standard Laptop request and receives the result of the process.
Rectangle with Numbered Header	Process	Represents an activity that processes or transforms the incoming request data.
Rectangle	Data Store	Represents information stored within the ServiceNow system, such as Requested Item and Catalog Task information.
Labeled Arrow	Data Flow	Represents the movement of request, approval, and task information between different entities and processes.

The symbol definitions follow the DFD legend provided in the template.

DFD – STANDARD LAPTOP PROCUREMENT AUTOMATION

External Entity

User / Employee

The user initiates the process by submitting a **Standard Laptop request** through the Service Catalog.

Process 1 – Submit Standard Laptop Request

The Standard Laptop request is submitted through the **Service Catalog**.

Data Flow:

Standard Laptop Request

Data Store 1 – Requested Item

The submitted request is stored as a **Requested Item** in ServiceNow.

Data Flow:

Requested Item Details

Process 2 – Request Approval

The Standard Laptop request is sent through the **Approval Process**.

Data Flow:

Approval Request

Process 3 – Approval Completed

The request is reviewed and the approval status is updated to **Approved**.

Data Flow:

Approved Request

Process 4 – Flow Designer Automation

After the request is approved, the **Standard Laptop Task** Flow is triggered.

The Flow processes the approved Requested Item and automatically creates a Catalog Task.

Data Flow:

Approved Requested Item

Data Store 2 – Catalog Task

The newly created Catalog Task contains the required task information, including:

- Short Description: **Laptop need to Configured**
- Description: **Laptop need to Configured**
- Assignment Group: **Hardware**

↓

External Entity / Responsible Team

Hardware Team

The Catalog Task is assigned to the **Hardware** assignment group for laptop configuration.

DATA FLOW DESCRIPTION

The process starts when the **User / Employee** submits a Standard Laptop request through the Service Catalog. The request is stored as a **Requested Item** in ServiceNow.

The Requested Item then goes through the **Approval Process**. Once the request is approved, the approved request is processed by **Flow Designer**.

The **Standard Laptop Task** Flow automatically creates a **Catalog Task** using the Requested Item information. The Catalog Task is configured with the required description and assigned to the **Hardware** assignment group.

Finally, the Hardware team receives the generated Catalog Task and can proceed with the laptop configuration.

Thus, the DFD represents the complete movement of data from **Standard Laptop Request** → **Requested Item** → **Approval** → **Flow Designer** → **Catalog Task** → **Hardware Team**.
