

SOLUTION REQUIREMENTS

Team ID: SWTID-2026-8434

Project Name: Standard Laptop Procurement Automation using ServiceNow Flow Designer

DEFINE FUNCTIONAL AND NON-FUNCTIONAL REQUIREMENTS

The solution requirements define what the **Standard Laptop Procurement Automation** system should do and how the solution should operate. The requirements are divided into **Functional Requirements (FR)** and **Non-Functional Requirements (NFR)**. Functional Requirements describe the specific functions and behaviors of the system, while Non-Functional Requirements describe the quality and operational characteristics of the system.

STEP 1: FUNCTIONAL REQUIREMENTS (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system should allow authorized ServiceNow users to access the Service Catalog and submit a Standard Laptop request.	High
2	Authorization Levels	The system should provide appropriate access for users involved in the Standard Laptop procurement process, including the requester, approver, and Hardware team.	High
3	External Interfaces	The solution does not require any external third-party API or external database. The automation is implemented within the ServiceNow platform using Flow Designer and Service Catalog components.	Low
4	Transactions Processing	The system should process the Standard Laptop request through the Service Catalog and approval process. After approval, the Flow should automatically create a Catalog Task.	High
5	Reporting	The system should provide visibility of the request, Requested Item, approval status, and generated Catalog Task through the ServiceNow interface.	Medium

S.No	Requirement Category	Requirement Description	Priority
6	Business Rules, etc.	When a Standard Laptop request is approved, the Flow should create a Catalog Task with the required description and assign it to the Hardware assignment group.	High
7	Compliance to Laws or Regulations	The solution should follow the access control and data handling practices applicable within the ServiceNow environment. No specific external regulatory requirement is defined for this project.	Low
8	Other	The Flow should be activated and associated with the Standard Laptop catalog item so that the automation can be executed during the request process.	High

The Functional Requirements follow the categories provided in the supplied template, including authentication, authorization, external interfaces, transaction processing, reporting, business rules, compliance, and other requirements.

STEP 2: NON-FUNCTIONAL REQUIREMENTS (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The automation should process the approved Standard Laptop request and create the required Catalog Task without unnecessary manual delay.	Catalog Task should be generated after the request reaches the approved state.
2	Scalability	The solution should support the processing of Standard Laptop requests through the configured ServiceNow workflow.	Multiple Standard Laptop requests should be processed using the same automated Flow.
3	Security & Data Privacy	The solution should operate within the ServiceNow platform and use the configured user access, roles, and assignment groups.	Only authorized users should perform the relevant request, approval, and task activities.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
4	Reliability & Availability	The Flow should consistently execute when the configured Standard Laptop request reaches the required approval condition.	Approved requests should generate the expected Catalog Task.
5	Usability & Accessibility	The Standard Laptop request and approval process should be simple for users to follow through the ServiceNow interface.	Users should be able to submit the request, view its status, and follow the approval process through ServiceNow.
6	Maintainability	The Flow configuration should be clear and manageable so that the Standard Laptop automation can be maintained when required.	Flow, Catalog Item, and task configuration should remain clearly defined and accessible to authorized administrators.

The NFR categories are based on the supplied template: Performance & Speed, Scalability, Security & Data Privacy, Reliability & Availability, Usability & Accessibility, and Other.

REQUIREMENT SUMMARY

The **Standard Laptop Procurement Automation** solution must provide an automated workflow for processing Standard Laptop requests. The system should allow the request to be submitted through the Service Catalog, proceed through the approval process, and automatically create a Catalog Task after approval.

The generated Catalog Task should contain the required task information and should be assigned to the **Hardware** assignment group. The solution should provide a consistent, reliable, and manageable workflow while reducing manual task creation and assignment.
