

Technology Stack

Project Name: Standard Laptop Procurement Automation using ServiceNow Flow Designer

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Service Catalog	Used to provide the interface through which users can submit the Standard Laptop request.
2	Backend / Server-Side	ServiceNow Flow Designer	Used to automate the procurement workflow, process the approved request, create a Catalog Task, and assign it to the Hardware team.
3	Database / Data Storage	ServiceNow Platform Database	Stores request details, Requested Items, approval information, and Catalog Task records required for the workflow.
4	Cloud / Hosting / Deployment	ServiceNow Platform	Provides the cloud-based environment in which the Service Catalog, Flow Designer, requests, approvals, and Catalog Tasks are configured and executed.
5	Version Control & CI/CD	GitHub	Used to store and manage the project documentation, screenshots, and other project-related files.
6	Third-Party APIs / Other Tools	ServiceNow Flow Designer	Provides the automation capability required to trigger the workflow and automatically create and assign the Catalog Task after approval.

Short conclusion:

The project uses the **ServiceNow Platform, Service Catalog, Flow Designer, and ServiceNow database** as its main technologies. GitHub is used for project documentation and version management.
