

SCALABILITY & FUTURE PLAN

Team ID: SWTID-2026-8434

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Current System Limitations

S.No	Limitation	Impact	Priority to Address
1	Current workflow is focused on Standard Laptop procurement	Other IT hardware procurement processes are not automated	Medium
2	Workflow is designed for the current procurement process	Additional procurement requirements may need further workflow configuration	Medium
3	Performance testing and large-scale load validation are not yet included	System behaviour under higher user loads needs further validation	Medium

Scalability Plan

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports the current Standard Laptop request workflow	Extend and test the workflow for a larger number of simultaneous users and requests
2	Data Storage	Uses ServiceNow records for requests and Catalog Tasks	Extend the use of ServiceNow records and reporting as procurement data increases
3	Performance	Current workflow automates request and task creation	Perform regular performance/load testing and optimize the workflow when request volume increases
4	Security	Access is managed through the ServiceNow platform	Apply appropriate ServiceNow roles and access controls as the project expands

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Standard Laptop procurement automation	Current	Automates the existing Standard Laptop procurement workflow
Phase 2	Extend automation to additional IT hardware	Future	Expands automation beyond Standard Laptop requests
Phase 3	Performance and scalability enhancement	Future	Supports increased users and higher request volumes
Phase 4	Advanced reporting and workflow enhancements	Future	Improves monitoring, tracking and overall procurement efficiency

Future Enhancement Summary

The current project focuses on automating the **Standard Laptop procurement and configuration workflow** using ServiceNow Flow Designer. The future plan is to extend the automation to additional hardware, support higher request volumes, improve performance, and provide enhanced monitoring and reporting.

The project objective already includes reducing manual intervention, improving resource utilisation and increasing efficiency in IT procurement, which provides the basis for these future enhancements.
